Dear Francis:

As we have discussed, Maui Pine is concerned about the drainage plan for the proposed Upcountry High School. With the latest revision, it is apparent that the soil from the mauka pineapple field will be washed down with storm water and accumulate in the desilting basin.

As you know, although they are no longer used, DDT, DBCP and Arsenic have been used by pineapple companies in the past. It has been shown that these materials are very persistent and can accumulate in soils. This may be unacceptable in desilting basins on a school site.

We appreciate your concerns and help.

Sincerely,

L. D. MacCluer
Plantation Manager
